

NEPTUNE Range

It is imperative to protect your sails whilst moored. At this point, they will be preserved from direct sunlight and moonlight.

The SAILONET NEPTUNE range of accessories, fully answers to these matters.

Mainsail, Furling-Genoa covers and Lazybags are made in a special acrylic marine material, SUNBRELLA. This material is extremely resistant to U.V light and available in different colours.

Spayhoods and Bimini top manufacturers already use this material, allowing matching colours.

All our covers and lazybags are put together with good quality equipment and the thread used is treated to resist U.V lights and moon lights.

The shape of the genoa cover fits perfectly the sail when rolled.

A lacing system is used to tie the sail preventing it from flapping in strong wind.

NEPTUNE

The genoa cover is equipped with a nylon zip and with a double lacing system

Its design makes an easy fitting to the shape of the rolled sail.

The cover is pulled using the spinnaker sheet: Two straps fitted on the top allow to hook the sheet.

Hold the zip whilst pulling the cover.

Double lacing system:

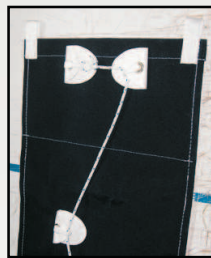

Once the cover is pulled using the spinnaker sheet, we pull down on the cover from the bottom.

Then tie up the top part with the matching laces and afterwards the bottom part with the other laces.

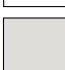

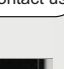

The surplus of laces can be put into the fitted pocket.
