

It is imperative to protect your sails whilst moored. At this point, they will be preserved from direct sunlight and moonlight.

The SAILONET NEPTUNE range of accessories, fully answers to these matters.

Mainsail, Furling-Genoa covers and Lazybags are made in a special acrylic marine material, SUNBRELLA. This material is extremely resistant to U.V light and available in different colours.

Spayhoods and Bimini top manufacturers already use this material, allowing matching colours.

All our covers and lazybags are put together with good quality equipment and the thread used is treated to resist U.V lights and moon lights.

The lazybags are made to measure. They fit either mainsails with loose foot or fitted to booms.

The lazybags are delivered fully equipped, but without the lazyjacks.

NEPTUNE
